Work Highlights

Mentor Connection Platform, PennApps

- Currently designing and building a platform to connect students who have questions or need project guidance with skilled mentors.
- An estimated 1,500+ students from all over the world and 50+ mentors will use the platform to coordinate Q&A for the PennApps hackathon, one of the largest and longest running student hackathons in the United States.

Product Checkout Manager, The David Casavant Archive

- Built a web application used internally by a New York clothing archive and rental company to communicate with clients and track inventory.
- Improved efficiency of rental process and organization of financial records.

Real Estate CRM, Forward Philly

- Migrated project to React and ES7, added API documentation, and created new app activity reporting feature.
- After implementing team activity reports, company outreach team completed 2x more successful contacts in an average week, making the entire company more efficient.

PhillyOpenVendor, Jarvus Innovations

- Created scripts to continuously collect, update, and format data from outdated City of Philadelphia procurement contract websites.
- This work was integrated into a tool now used by the City of Philadelphia to organize all of its open data APIs.

Interactive Festival Guide, Pinelands Music Festival

- Personalized and improved the artist discovery experience for festival attendees using a hybrid mobile app released for iPhone and Android (built using Ionic Framework and Angular.js).
- Downloaded by 100+ unique devices across the App Store and Google Play store.
